Visual changes include a plus/minus button for adjusting quantity of an order, text labeling each picture on the Cookies (product-browsing) page, and a question mark that allows for help/explanation on what the day/week/month mean. Most of the work was not visible, within the javascript storage and objects, since these were hardcoded earlier.

New:
- added Cart page
        - selector for quantity and frequency
        - functional "Remove" button
                - deletes the chocolate chip cookie
- Cookie class
